A **CARLISLE** COMPANY

### Are Larger Mats Better Than Smaller Mats?

Large mats have drawbacks! Large mats, such as a 6' x 12', weigh up to 288 lbs. and are not designed for livestock use. Those mats are very hard and contain fibers such as nylon and rayon, which do not expand and contract with the rubber, eventually resulting in curling, cracking, and shrinking.

### Other Uses For Ultimate RB USA Made Stall Mats:

- Dog Kennels
- Dog Runs
- Horse Trailers
- Livestock Trailers
- Wash Rack Areas
- Aisleways
- Muddy Areas
- Grooming Stalls
- Tack & Feed Areas
- Dog Agility Courses

### Also Comes In Rolls!

Rolls come in standard sizes, 3/8" thick, 4' x 25', and 4' x 50'.

### Before You Buy

Ultimate RB USA Made Stall Mats carry a 15-Year Limited Warranty to ensure your investment is wellgrounded. Horse owners nationwide have come to know and trust the Ultimate RB name for quality and reliability.

Ultimate RB USA Made Stall Mat 3/4" thick material is warranted only for normal horse stall applications. (3/4" thick mats may not be sufficient for draft horses under long-term use.) 1/2" thick Ultimate RB USA Made Stall Mats are also available, and are warranted solely for use as trailer flooring, barn aisle-ways, or in stalls exclusively used for miniature horses. Interlocking Ultimate RB USA Made Stall Mat kits in the 3/4" thickness are available through special order at your local Ultimate RB USA Made Stall Mat distributor.

### USA Made Stall Mats

Textured Anti-Skid Surface  
Smooth, Easy to clean

# The Ultimate RB Advantage

Ultimate RB is an exciting, progressive, and expanding company. Our success is the result of innovation, high quality products, and excellent customer service. Constant attention to these core elements has allowed us to become one of the largest manufacturers of recycled rubber products.

## Increased Comfort and Safety

Most stall surfaces - concrete, dirt, clay or aggregate (loose fill) - are hard on animals who stand for extended periods of time. Ultimate RB USA Made Stall Mats provide maximum support and traction, while anti-fatigue qualities reduce the amount of stress on your animals' legs, back, and muscles. Ultimate RB USA Made Stall Mats are also easily installed, resilient, and durable.

## Prevent Damage to Floors from Pawing Horses

Ultimate RB USA Made Stall Mats decrease the effects of a digging horse by giving you an even floor eliminating the need to refill holes previously dug.

## Cut Stall Cleaning Time In Half

Ultimate RB USA Made Stall Mats provide cushioning to support horses' knees, so you only need to keep enough bedding to absorb the waste. This reduces your daily maintenance time and costs by 50%.

## Eliminate Stall Odors

A modest amount of bedding used along with Ultimate RB USA Made Stall Mats absorbs waste atop the mats. Removing the soiled bedding allows you to remove nearly 100% of the waste and odor.

## Commonly Asked Questions

### Q. What are the differences between rubber mats?

**A.** Most mats are manufactured using a vulcanization process. During manufacturing, sulfur is mixed with rubber, heated, and pressed in molds while emitting harmful pollutants into the air. This allows us to offer a variety of sizes and factory sheared edges for a tighter fit and stronger, more resilient mats.

### Q. Do smooth mats have the same traction as textured mats?

**A.** The amount of traction in a mat is directly related to the softness or hardness of the mat. The harder the surface, with or without texturing (pebbles, diamonds, or grooves), the more slippery the mat is. The softer the mat, with or without texturing, the more traction the mat will provide.

### Q. Are some mats softer than others?

**A.** Polymer bonded mats are much softer than vulcanized mats. Vulcanized mats are very hard due to the extreme pressure used to bond the rubber together. We use a space age polymer agent specifically designed to provide our mats with the utmost strength, resilience, cushioning, and comfort.

### Q. What about drainage grooves?

**A.** A mat is only as thick as its thinnest point. When installing grooved mats over any surface, the grooves become a prime area for bacteria to grow and multiply. The draining feature works only when all of the grooves are lined up throughout the stall. Installing grooved mats actually requires more matting in order to line up the grooves.

### Q. Where does the urine go?

**A.** When properly installed, Ultimate RB USA Made Stall Mats are tight-fitting with no large gaps along the walls or seams. Use an adhesive/caulk to seal and glue mats together, or allow the bedding to pack into the seams to create an effective caulk. This provides a surface where urine can pool on top of the mat and be absorbed by bedding. The bedding absorbs the urine, so cleaning your stall removes nearly all of the waste.
